## **SILICONE WATER REPELLENT**

### **PROPERTIES AND USES**

**NOULA impregnating agent**, when used as recommended, produces excellent results on almost all absorbent mineral substrates.

Particularly worth mentioning are its resistance to alkalis, its good penetration power and its outstanding beading effect.

**NOULA impregnating agent** is colorless no visual effects are left on the surface.

**NOULA impregnating agent** requires no dilution, in order to be effective as water-repellent, just damp surface with it.

Surface to be treated must be dust free in order to achieve good penetration and good surface absorption.

### **Disclaimer**

It is the user responsibility to get sure of the use of the product in a correct way and place. As Noula paints has no control over the improper usage of the product we cannot be hold responsible for any consequences associated with their use.
